

INSTALLATION SPECIFICATION SHEET

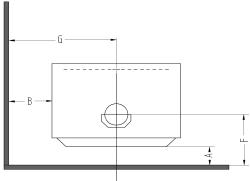

These instructions must be used in conjunction with the 'General Installation Instructions' for MASPORT wood fires.

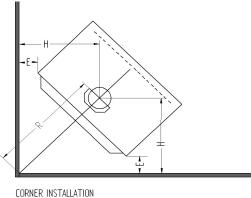

CLEARANCE REQUIREMENTS

This fire has been tested to the Australian/New Zealand Standard AS/NZS 2918:2001 and all installations must be in accordance with the minimum clearances to combustibles indicated in these instructions.

The minimum clearances to combustables may be reduced if the combustable walls are shielded with an approved non-combustable material. Details of suitable materials and appropriate clearance reduction factors are present in Section 3 of AS/NZS 2918:2001.

* AHD SPECIAL INSULATED FLUE SYSTEM

 \varnothing for minimum constructional requirements see general installation instructions.

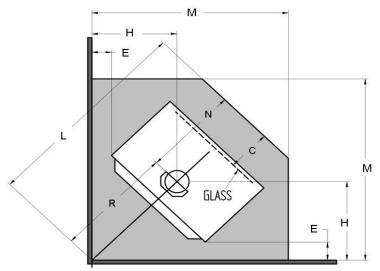

Valid only when the fire is exactly at its minimum allowable wall clearance.

NOTE: Where a fan is being fitted, you may prefer to increase the 'A' dimension to 100 mm to provide easier access for servicing. If so, the amount you add to 'A' to bring it to 100 mm must also be added to the 'C' and 'S' dimensions.

Assembly of your Micros Clean Air HW Logaire Wood Fire

1. Remove the contents from the fire and assemble the pedestal and base unit using the nuts and bolts supplied. (Note: the longer bolts are for stage 2). The ash shelf also needs bolting to the lower front of the unit at this stage as well.

2. Lower the fire on to the now assembled pedestal and base unit and bolt to the fire.

3. Place assembled fire in position and seismic restraint to the floor.

4. Next, if not already fitted in place, fit the baffle plate into place. The baffle plate is to be situated in the upper half of the fire and sits onto the brackets welded inside the firebox.

5. Ensure the ceramic baffle blanket is fitting flat on the top Face of the Baffle.

6. The ash shelf will need to be unpacked and assembled to the firebox.
